

Executive Summary

CCL PRODUCTS (INDIA) LIMITED

Valuation date 1 August 2025

The comparable-company analysis indicates that CCL Products traded below the central values implied by the selected peer group on 1 August 2025. Against the observed share price of ₹894.10, the simple average of the six central EV/EBITDA and P/E outputs is approximately ₹1,396 per share, implying potential upside of 56%. Because the selected peers trade across a wide multiple range, the outcome should be treated as a market-based valuation range rather than a single precise target price.

₹ 894.10	₹ 653-1990
Market Price	Full output range per share

Trading comparable framework

- CCL is valued using **EV/EBITDA** and **P/E** multiples for LTM, FY2026E and FY2027E. Forecast metrics are based on broker-derived consensus information available by the valuation date.
- Median-multiple outputs imply share prices of **₹1649, ₹1,242 and ₹1,277** under EV/EBITDA, and **₹1,811, ₹1,138 and ₹1,257** under P/E for LTM, FY2026E and FY2027E, respectively.
- The full minimum-to-maximum range across the six periods and methods is **₹653-₹1,990 per share**. The simple average of the six Median -Multiple outputs is approximately **₹1,396 per share**.
- Peer medians decline on forward estimates: EV/EBITDA moves from **42.8x LTM** to **28.5x FY2026E** and **24.2x FY2027E**; P/E moves from **77.9x** to **43.8x** and **35.9x**.

Business and peer context

CCL is an export-oriented, specialised coffee manufacturer serving predominantly B2B and private-label customers. Galaxy Surfactants and Fine Organic provide the closest operating-model analogues; Syrma SGS and Neuland add customer-specific manufacturing exposure; Tata Consumer contributes coffee-sector relevance but is larger and more consumer-brand oriented.

Key considerations

- The peers span different sectors, scale, margins and capital structures; high-multiple observations materially widen the valuation range.
- Forecast EBITDA and EPS rely on broker-derived consensus available as of the valuation date and are sensitive to revisions.
- The analysis is sensitive to peer selection, use of averages versus medians, net-debt adjustments and the treatment of non-recurring earnings items.
- Differences in leverage, growth, profitability and business mix mean that no selected company is a perfect pure-play comparable for CCL.

The trading-comparable analysis supports a value above CCL's observed market price, with an average implied value of approximately ₹1,396 per share. However, the wide dispersion between the minimum and maximum outputs reduces the reliability of any single point estimate. The central valuation should therefore be presented together with the full range and interpreted in light of CCL's operating similarities and differences versus each selected peer.
